When I first saw these ion spas around I must admit I was wondering what are these people lined up for to stick their feet in dirty water. Then I heard it was a way the body could help detoxify. Being a Chiropractic Doctor, and having studied from the beginning nutrition I could see this would have a place, but still after a few years never stop by one of the booths at the seminars to try the spa. A few months ago I was introduced to the spa by John Seymour who came into my office all excited and said this would change my life. You know I've heard this one before but he was pretty convincing so I took the time to have a treatment. Right after the treatment I knew he was right. I felt this wonderful energy in my legs and body, and said simply I'll buy one.

I started using it in the office on patients with a curiosity to see if it was just I or is this real. Since then I have had patients say back pain is better, headaches, digestion improves, skin rashes go away and most comment on the overall feeling of well-being. I was overwhelmed with people wanting to try and set up appointments to try the ion spa. I began selling them in the practice because people wanted to take them home to their families. That's when I realized I had to do the same for my mother who lives too far away to use mine. I bought one for her and she and my brother get to share the benefits of fewer medications because they feel better, and are better.

What's nice about the Enhanced Living ion spa is that I got into the health field to truly help people, and with the ion spa I can say it is making a big difference. I highly recommend this to health care practitioners and that you have one for home use for you and your family.
